

The CARELINER|M is distinguished by three principles: value stability, user comfort and a comfortable travel experience for your horse. These are made possible by a wide range of innovations - e.g., the unique BÜCKER LONG-LIFE-System with rot-proof materials, a body-height access door, an LED periphery lighting system for loading and unloading at night and an ergonomic environment designed to create a calming atmosphere for a horse. All of which also look extraordinarily stylish. It's not without reason that the BÜCKER Design Concept won a Red Dot Award. Therefore, our tip: Get hitched!
